SHORTENED STATUTORY PERIOD OF RESPONSE		MAIL DATE	DELIVERY MODE	
3 MONTHS		12/28/2006	PAPER	

**Please find below and/or attached an Office communication concerning this application or proceeding.**

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

<b>Office Action Summary</b>	<b>Application No.</b> 09/970,371	<b>Applicant(s)</b> TENORIO, NOEL	
	<b>Examiner</b> Sara Chandler	<b>Art Unit</b> 3693	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 24 November 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-29 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-29 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## **DETAILED ACTION**

### ***Information Disclosure Statement***

The information disclosure statement filed 11/28/01 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each cited foreign patent document; each non-patent literature publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered. Specifically, copies of the NPL references O and U on the IDS are missing.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-9 and 29 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. The scope Claims 1 and 29 is broad because it covers every conceivable system for achieving the stated purpose when the disclosure only discloses that which was known to the inventor. Dependent claims 2-9 are similarly rejected. See MPEP §2164.08(a).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

**Claims 1-29** are rejected under 35 U.S.C. 103(a) as being unpatentable over Moshal, US Pub. No. 2002/0032637.

**Re Claims 1, 10 and 19:** Moshal discloses a system/method/software for providing visualization of market offers, comprising a computer system operable to: receive offer data for a plurality of offers, the received offer data reflecting values specified in the offers for a plurality of offer variables (Moshal, abstract, [0025] [0026] [0027] [0044] [0045]); and generate a display of the received offer data, the display comprising a plurality of patterns, each pattern representing a particular offer and particular offer variable and comprising a set of one or more geometric display elements that by virtue of their appearance collectively encode, according to a predefined encoding scheme, a value for the offer variable (Moshal, Figs. 1-18; [0006] [0024] [0026] [0027] [0029] [0030] [0031] [0033] [0034] [0035] [0039] [0040] [0044] [0045] plurality offers (e.g., bid/ask, seller/buyer), plurality of offer variables (e.g., #items, type, user, price, length of participation etc.)).

Art Unit: 3693

Moshal fails to explicitly disclose a system/method/software comprising: a plurality of bars, each bar representing a particular offer variable.

Official Notice is taken that it was old and well-known at the time the invention was made to use charts and graphs to present and analyze numerical and text data. Specifically, it was old and well-known at the time of the invention to use a plurality of bars, each bar representing a particular offer variable. For example, Excel programs have been used frequently in reports, slide shows and presentations to show diagrams in the form of bars, lines and other visual forms.

Documentary Evidence:

Levine, US Pub. No. 2002/0178105 - Fig. 6 ;

Lee, US Pub. No. 2002/0065762 - Figs. 5-14; [0030] [0056]; and

Russell, US Pat. No. 7,020,630 - Fig. 8

Alternatively, the difference between Moshal and the claimed invention is non-functional descriptive material. The system/method/software of the claimed invention provides for a display comprising a plurality of bars, each bar representing particular offer variables, these features provide merely an ornamental arrangement of graphical images (See MPEP 2106 IV B 1 (b))

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the teachings of Moshal to provide a system/method/software for providing visualization of market offers, comprising a computer system operable to: - receive offer data for a plurality of offers, the received offer data reflecting

Art Unit: 3693

values specified in the offers for a plurality of offer variables; and generate a display of the received offer data, the display comprising a plurality of patterns, each pattern representing a particular offer and comprising a plurality of bars, each bar representing a particular offer valuable and comprising a set of one or more geometric display elements that by virtue of their appearance collectively encode, according to a predefined encoding scheme, a value for the offer variable corresponding to the bar.

As suggested by Moshal, users should have access to an easily understandable version of a the current state of critical data and any objects other than circles could be used to represent the buyers and sellers (and inherently, there respective offers also).

**Re Claims 2,11 and 20:** Moshal discloses a system/method/software, wherein the predefined encoding scheme is selected such that a set of geometric display elements encoding a first value of a first offer variable in a first pattern associated with a first offer are readily visually distinguishable from a set of geometric display elements encoding a second value of the first offer variable in a second pattern associated with a second offer if the first value is not substantially similar to the second value (Moshal, [0029] [0030] [0031] [0033] [0035]).

**Re Claims 3,12 and 21:** Moshal discloses a system/method/software, wherein the sets of geometric display elements encode associated values according to a predefined color scheme (Moshal, [0031]); and each geometric display element in a set of geometric display elements has a color according to the value being represented and the predefined color scheme for encoding the value in the set of geometric display elements, the color for a particular

Art Unit: 3693

geometric display element being different than the colors of other geometric display elements in the same set of geometric display elements (Moshal, [0031]).

**Re Claims 4,13 and 22:** Moshal fails to explicitly disclose system/method/software, wherein a user is a buyer and the offers comprise asks only from sellers on an approved vendor list (AVL). Official Notice is taken that it is old and well-known for buyers and sellers to limit their business transactions to preferred parties. Specifically, it was old and well known to provide wherein a user is a buyer and the offers comprise asks only from sellers on an approved vendor list (AVL). For example, preferred lists are used in auctions, shopping, online transactions etc.

Documentary Evidence:

Reamer, US Pub. No. 2002/0194104 – abstract; [0016] [0018] [0021]; claims 2,3;  
Edgar, US Pub. No. 2002/0091590 – [0026]; claim 3; and  
Centner, US Pub. No. 2002/0007324 – [0005] [0015].

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teachings of Moshal to provide system/method/software, wherein the user is a buyer and the offers comprise asks only from sellers on an approved vendor list (AVL). One would have been motivated to avoid fraud, maintain business related and facilitate a more efficient experience.

**Re Claims 5,14 and 23:** Moshal discloses a system/method/software, wherein a value encoded in a set of geometric display elements comprises a range of values within a predetermined range values (Moshal, [0029] [0030] [0031] [0033] [0035]).

Art Unit: 3693

**Re Claims 6,15 and 24:** Moshal fails to explicitly disclose a system/method/software, wherein the bars are columns. Official Notice is taken that it was old and well-known at the time the invention was made to use charts and graphs to present and analyze numerical and text data. Specifically, it is was old and well-known at the time of the invention to use a plurality of bars, each bar representing a particular offer variable. For example, Excel programs have been used frequently in reports, slide shows and presentations to show diagrams in the form of bars, lines and other visual forms.

Documentary Evidence:

Levine, US Pub. No. 2002/0178105 - Fig. 6 ;

Lee, US Pub. No. 2002/0065762 - Figs. 5-14; [0030] [0056]; and

Russell, US Pat. No. 7,020,630 - Fig. 8

Alternatively, the difference between Moshal and the claimed invention is non-functional descriptive material. The system/method/software of the claimed invention provides for a display comprising a plurality of bars, each bar representing particular offer variables, these features provide merely an ornamental arrangement of graphical images (See MPEP 2106 IV B 1 (b)). It would have been obvious to one of ordinary skill in the art hat the time of the invention to modify the teachings of Moshal to disclose a system/method/software, wherein the bars are columns. As suggested by Moshal, users should have access to an easily understandable version of a the current state of critical data and any objects other than circles could be used to represent the buyers and sellers (and inherently, there respective offers also).

Art Unit: 3693

**Re Claims 7,16 and 25:** Moshal discloses a system/method/software, wherein the computer system is operable to:

access a user request, the user request comprising a plurality of entered values for a plurality of offer variables (Moshal, [0026] [0027]); and

generate within the display a pattern representing the user request, the pattern for the user request comprising particular offer variables and comprising a set of one or more geometric display elements that by virtue of their appearance collectively encode, according to the predefined scheme, entered values for the offer variables, such that a user may compare the pattern for the user request with the patterns for one or more offers in connection with a market decision (Moshal, [0026] [0027]).

Moshal fails to explicitly disclose a system/method/software comprising: a plurality of bars, each bar representing a particular offer variable. Official Notice is taken that it was old and well-known at the time the invention was made to use charts and graphs to present and analyze numerical and text data. Specifically, it is was old and well-known at the time of the invention to use a plurality of bars, each bar representing a particular offer variable. For example, Excel programs have been used frequently in reports, slide shows and presentations to show diagrams in the form of bars, lines and other visual forms.

Documentary Evidence:

Levine, US Pub. No. 2002/0178105 - Fig. 6 ;

Lee, US Pub. No. 2002/0065762 - Figs. 5-14; [0030] [0056]; and

Russell, US Pat. No. 7,020,630 - Fig. 8

Alternatively, the difference between Moshal and the claimed invention is non-functional descriptive material. The system/method/software of the claimed invention provides for a display comprising a plurality of bars, each bar representing particular offer variables, these features provide merely an ornamental arrangement of graphical images (See MPEP 2106 IV B 1 (b)).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the teachings of Moshal to provide a system/method/software, wherein the computer system is operable to: access a user request, the user request comprising a plurality of entered values for a plurality of offer variables; and generate within the display a pattern representing the user request, the pattern for the user request comprising a plurality of bars, each bar representing a particular offer variable and comprising a set of one or more geometric display elements that by virtue of their appearance collectively encode, according to the predefined scheme, an entered value for the offer variable corresponding to the bar, such that a user may compare the pattern for the user request with the patterns for one or more offers in connection with a market decision.

As suggested by Moshal, users should have access to an easily understandable version of a the current state of critical data and any objects other than objects other than circles could be used to represent the buyers and sellers (and inherently, there respective offers also).

**Re Claims 8,17 and 26:** Moshal discloses system/method/software, where the computer system is operable to:

receive a selection of a particular pattern associated with a particular offer (Moshal, Figs. 1-18; [0006] [0024] [0026] [0027] [0029] [0030] [0031] [0033] [0034] [0035] [0039] [0040] [0044] [0045] Inherent features);

receive an instruction to generate an order based on the values for the offer associated with the selected pattern (Moshal, Figs. 1-18; [0006] [0024] [0026] [0027] [0029] [0030] [0031] [0033] [0034] [0035] [0039] [0040] [0044] [0045] Inherent features); in response to receiving the instruction, automatically generate an order based on the values for the offer associated with the selected pattern (Moshal, Figs. 1-18; [0006] [0024] [0026] [0027] [0029] [0030] [0031] [0033] [0034] [0035] [0039] [0040] [0044] [0045] Inherent features); and

communicate the generated order for matching with the selected offer (Moshal, Figs. 1-18; [0006] [0024] [0026] [0027] [0029] [0030] [0031] [0033] [0034] [0035] [0039] [0040] [0044] [0045] Inherent features).

**Re Claims 9, 18 and 27:** Moshal discloses a system/method/software, wherein the computer system is operable to display the values specified in the user request and the values specified in the offer associated with the selected pattern to allow the user to compare these values before providing an instruction to generate an order (Moshal, Figs. 1-18; [0006] [0024] [0026] [0027] [0029] [0030] [0031] [0033] [0034] [0035] [0039] [0040] [0044] [0045] Inherent features).

**Re Claim 28:** Moshal discloses a system for providing visualization of market offers, comprising:

means for receiving offer data for a plurality of offers, the offer data reflecting

Art Unit: 3693

values specified in the offers for a plurality of offer variables (Moshal, abstract, [0025] [0026] [0027] [0044] [0045]); and

means for generating a display of the received offer data, the display comprising a plurality of patterns, each pattern representing a particular offer and particular offer variable and comprising a set of one or more geometric display elements that by virtue of their appearance collectively encode, according to a predefined encoding scheme, a value for the offer variable (Moshal, Figs. 1-18; [0006] [0024] [0026] [0027] [0029] [0030] [0031] [0033] [0034] [0035] [0039] [0040] [0044] [0045] plurality offers (e.g., bid/ask, seller/buyer), plurality of offer variables (e.g., #items, type, user, price, length of participation etc.)).

Moshal fails to explicitly disclose a system/method/software comprising: means for providing a plurality of bars, each bar representing a particular offer variable. Official Notice is taken that it was old and well-known at the time the invention was made to use charts and graphs to present and analyze numerical and text data. Specifically, it is was old and well-known at the time of the invention means for providing a plurality of bars, each bar representing a particular offer variable. For example, Excel programs have been used frequently in reports, slide shows and presentations to show diagrams in the form of bars, lines and other visual forms.

Documentary Evidence:

Levine, US Pub. No. 2002/0178105 - Fig. 6 ;

Lee, US Pub. No. 2002/0065762 - Figs. 5-14; [0030] [0056]; and

Russell, US Pat. No. 7,020,630 - Fig. 8

Alternatively, the difference between Moshal and the claimed invention is non-functional descriptive material. The system/method/software of the claimed invention provides for a display comprising means for providing a plurality of bars, each bar representing a particular offer variable, these features provide merely an ornamental arrangement of graphical images (See MPEP 2106 IV B 1 (b)).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the teachings of Moshal to provide a system for providing visualization of market offers, comprising: means for receiving offer data for a plurality of offers, the offer data reflecting values specified in the offers for a plurality of offer variables; and means for generating a display of the offer data, the display comprising a plurality of patterns, each pattern representing a particular offer and comprising a plurality of bars, each bar representing a particular offer variable and comprising a set of one or more geometric display elements that by virtue of their appearance collectively encode, according to a predefined encoding scheme, a value for the offer variable corresponding to the bar.

As suggested by Moshal, users should have access to an easily understandable version of a the current state of critical data and any objects other than objects other than circles could be used to represent the buyers and sellers (and inherently, there respective offers also).

**Re Claim 29:** Moshal discloses a system for providing visualization of market Offers, comprising a computer system Operable to:  
receive offer data for a plurality of offers, the received offer data reflecting

Art Unit: 3693

values specified in the offers for a plurality of offer variables (Moshal, abstract, [0025] [0026] [0027] [0044] [0045]); and

generate a display of the received offer data, the display comprising a plurality of patterns, each pattern representing a particular offer and particular offer variable and comprising a set of one or more geometric display elements that collectively encode, according to a predefined encoding scheme, a value for the offer variable (Moshal, Figs. 1-18; [0006] [0024] [0026] [0027] [0029] [0030] [0031] [0033] [0034] [0035] [0039] [0040] [0044] [0045] plurality offers (e.g., bid/ask, seller/buyer), plurality of offer variables (e.g., #items, type, user, price, length of participation etc.);

the predefined encoding scheme being selected such that a set of geometric display elements encoding a first value of a first offer variable in a first pattern associated with a first offer are readily visually distinguishable from a set of geometric display elements encoding a second value of the first offer variable in a second pattern associated with a second offer if the first value is not substantially similar to the second value (Moshal, [0029] [0030] [0031] [0033] [0035]);

access a user request, the user request comprising a plurality of entered values for a plurality of offer variables (Moshal, [0026] [0027]); and

generate within the display a pattern representing the user request, the pattern for the user request comprising particular offer variables and comprising a set of one or more geometric display elements that by virtue of their appearance collectively encode, according to the predefined encoding scheme, entered values for the offer variables,

Art Unit: 3693

such that a user may compare the pattern for the user request with the patterns for one or more offers in connection with a market decision (Moshal, [0026] [0027] [0031])).

Moshal fails to explicitly disclose a system/method/software comprising: a plurality of bars, each bar representing a particular offer variable. Official Notice is taken that it was old and well-known at the time the invention was made to use charts and graphs to present and analyze numerical and text data. Specifically, it is was old and well-known at the time of the invention to use a plurality of bars, each bar representing a particular offer variable. For example, Excel programs have been used frequently in reports, slide shows and presentations to show diagrams in the form of bars, lines and other visual forms.

Documentary Evidence:

Levine, US Pub. No. 2002/0178105 - Fig. 6 ;

Lee, US Pub. No. 2002/0065762 - Figs. 5-14; [0030] [0056]; and

Russell, US Pat. No. 7,020,630 - Fig. 8

Alternatively, the difference between Moshal and the claimed invention is non-functional descriptive material. The system/method/software of the claimed invention provides for a display comprising means for providing a plurality of bars, each bar representing a particular offer variable; these features provide merely an ornamental arrangement of graphical images (See MPEP 2106 IV B 1 (b)).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the teachings of Moshal to provide a system for providing visualization of market Offers, comprising a computer system operable to: receive offer

Art Unit: 3693

data for a plurality of offers, the received offer data reflecting values specified in the offers for a plurality of offer variables; and generate a display of the received offer data, the display comprising a plurality of patterns, each pattern representing a particular offer and comprising a plurality of bars, each bar representing a particular offer variable and comprising a set of one or more geometric display elements that collectively encode, according to a predefined encoding scheme, a value for the offer variable corresponding to the bar, the predefined encoding scheme being selected such that a set of geometric display elements encoding a first value of a first offer variable in a first pattern associated with a first offer are readily visually distinguishable from a set of geometric display elements encoding a second value of the first offer variable in a second pattern associated with a second offer if the first value is not substantially similar to the second value; access a user request, the user request comprising a plurality of entered values for a plurality of offer variables; and generate within the display a pattern representing the user request, the pattern for the user request comprising a plurality of bars, each bar representing a particular offer variable and comprising a set of one or more geometric display elements that by virtue of their appearance collectively encode, according to the predefined encoding scheme, an entered value for the offer variable corresponding to the bar, such that a user may compare the pattern for the user request with the patterns for one or more offers in connection with a market decision.

As suggested by Moshal, users should have access to an easily understandable version of a the current state of critical data and any objects other than objects other

Art Unit: 3693

than circles could be used to represent the buyers and sellers (and inherently, there respective offers also).

### ***Response to Arguments***

#### **Double Patenting**

Withdrawn in view of the Terminal Disclaimer (11/24/06).

#### **Information Disclosure Statement**

It is unclear what reference has been submitted that the applicant would like to have considered.

#### **112, paragraph 1**

Applicant's arguments have been fully considered but they are not persuasive.

Claims 1 and 29 are rejected because they comprise single means claims. Dependent Claims 2-9 are similarly rejected.

A "single means" claim, i.e. where a means recitation does not appear in combination with another recited element or means, is subject to an undue breadth rejection under 35 U.S.C. 112, first paragraph. See *In re Hyatt*, 218 USPQ 195, (CAFC 1983) and MPEP 2164.08(a).

A single means claim, i.e., where a means recitation does not appear in combination with another recited element of means, is subject to an undue breadth rejection under 35 U.S.C. 112, first paragraph. In *re Hyatt*, 708 F.2d 712, 218 USPQ 195 (Fed. Cir. 1983) (A single means claim which covered every conceivable means for achieving the stated purpose was held nonenabling for the scope of the claim because the specification disclosed at most only those means known to the inventor). When claims depend on a recited property, a fact situation comparable to *Hyatt* is possible, where the claim covers every conceivable structure (means) for achieving the stated property (result) while the specification discloses at most only those known to the inventor. Although the court in *Fiers v. Sugano*, 984 F.2d 164, 25 USPQ2d 1601 (Fed. Cir. 1993) did not decide the enablement issue, it did suggest that a claim directed to all DNAs that code for a specified polypeptide is analogous to a single means claim. 2164.08(a) Single Means Claim

#### **112, paragraph 2**

Withdrawn in view of applicant's amendment.

**103**

Applicant's arguments have been fully considered but they are not persuasive.

Applicant argues, the prior art fails to explicitly disclose, "A system for providing visualization of market offers."

In response to applicant's arguments, the recitation has not been given patentable weight because the recitation occurs in the preamble. A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See *In re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951).

Applicant argues, that Official Notice has been traversed and the Official Notice is improper under MPEP § 2144.03.

Official Notice was taken that it was old and well-known in the art at the time the invention was made to:

- (1) provide a system/method/software wherein a display further comprises a plurality of bars, each bar representing a particular offer variable; and
- (2) provide a system/method/software, wherein the user is a buyer and the offers comprise asks only from sellers on an approved vendor list (AVL).

Art Unit: 3693

Applicant failed to adequately traverse the Official Notice taken because the applicant has failed to state why the noticed fact is not common knowledge or well-known in the art.

To adequately traverse such a finding, an applicant must specifically point out the supposed errors in the examiner's action, which would include stating why the noticed fact is not considered to be common knowledge or well-known in the art. See 37.CFR 1.111(b). See MPEP § 2144.03(C).

Due to the inadequate traversal, the Official Notice is taken as admitted prior art.

If the applicant does not traverse the examiner's assertion of official notice or applicant's traverse is not adequate, the examiner should clearly indicate in the next Office action that the common knowledge or well-known in the art statement is taken to be admitted prior art because applicant either failed to traverse the examiner's assertion of official notice or that the traversal was inadequate. If the traverse was inadequate, the examiner should include an explanation as to why it was inadequate. See MPEP § 2144.03(C).

Nevertheless, Documentary Evidence in support of the Official Notice taken has been submitted.

In regards to the assertion that it was old and well-known to (1) provide a system/method/software wherein a display further comprises a plurality of bars, each bar representing a particular offer variable. The following evidence shows the use charts and graphs to present and analyze numerical and text data. Specifically, a plurality of bars, each bar representing a particular offer variable.

Documentary Evidence:

Levine, US Pub. No. 2002/0178105 - Fig. 6 ;

Lee, US Pub. No. 2002/0065762 - Figs. 5-14; [0030] [0056]; and

Russell, US Pat. No. 7,020,630 - Fig. 8

In regards to the assertion that is was old and well-known to 2) provide a system/method/software, wherein the user is a buyer and the offers comprise asks only from sellers on an approved vendor list (AVL). The following references show buyers and sellers limiting their business transactions to preferred parties. Specifically, showing wherein the user is a buyer and the offers comprise asks only from sellers on an approved vendor list (AVL).

Documentary Evidence:

Reamer, US Pub. No. 2002/0194104 – abstract; [0016] [0018] [0021]; claims 2,3;  
Edgar, US Pub. No. 2002/0091590 – [0026]; claim 3; and  
Centner, US Pub. No. 2002/0007324 – [0005] [0015].

Applicant, argues that there is no teaching, suggestion or motivation to modify the reference (Moshal).

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case:

The Office Action (08/22/06) states, "As suggested by Moshal, users should have access to an easily understandable version of a the current state of critical data and any

objects other than circles could be used to represent the buyers and sellers (and inherently, their respective offers also)." See page 7 of Office Action.

See also, Moshal paragraphs [0003] [0006] [0047] for example. [0003] of Moshal which suggests how it is desirable for a user to have access to an understandable version of critical data. In [0006] of Moshal, the objects described, are not limited to a particular shape, however Moshal emphasizes that the characteristics of the object must convey information about the buyer and seller and their respective bids or offers. [0047] of Moshal suggests that the representation shown provide examples only.

Applicant argues, that impermissible hindsight reasoning is used.

In response to applicant's argument that the examiner's conclusion of obviousness is based upon improper hindsight reasoning, it must be recognized that any judgment on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the claimed invention was made, and does not include knowledge gleaned only from the applicant's disclosure, such a reconstruction is proper. See *In re McLaughlin*, 443 F.2d 1392, 170 USPQ 209 (CCPA 1971).

Applicant argues, the Legal Standard for Obviousness under 35 USC § 103 has not been established.

Two grounds for rejection under 35 USC § 103 were presented: (1) Moshal as modified by Official Notice. (2) Moshal in view of the differences between the claimed invention and Moshal amounting to non-functional descriptive material (and thus were

Art Unit: 3693

not given patentable weight). The first ground of rejection were addressed in the analysis above. Applicant has failed to address the second ground of rejection entirely and the rationale first cited 11/24/06 is maintained.

***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sara Chandler whose telephone number is 571-272-1186. The examiner can normally be reached on 8-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Trammell can be reached on 571-272-6712. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
